

Cantaloupe

Cantaloupe are also known as muskmelons. They have an orange flesh with pale green to tan color with lightly ribbed exterior skin. Cantaloupe provides the most beta-carotene in the entire melon family.

Cantaloupe are either a round or slightly oblong shape, measure 4.5 - 6.5 inches in diameter and weigh 450 - 850 gm, often times more than a kilo. Internally, the flesh color ranges from orange-yellow to a light orange color, has soft consistency and juicy texture with a sweet, musky aroma when the fruit is at it ripest. In the center, there is a hollow cavity filled with small off-white color seeds encased in a thin mucus like web.

Cantaloupe is an excellent source of Vitamin A, which is a power antioxidant and is essential for healthy vision.

Cantaloupe is typically available year-round, with a June through August peak season.
